

SAGA Professa T45 computer controlled sliding table saw

Professa/ENG T45 series is a saw with future technology, it is a world class advanced sliding table saw, it is a mile stone for industry saw, with on time program for cutting, optional optimized cutting software, fully automatic servo controlled rip cutting fence, professa T45 even got cross ruler servo control called Dual linear accuracy technology, large 3200(optional 3800mm) sliding table, max 600mm diameter blade can be install, up to 210mm max cutting thickness, all reflection of a heavy duty tough working machine.

Professional industrial heavy duty saw system, solid cast iron with integrate strengthen frame, annealing treatment to release tension of metal, large horizontal metal CNC center processed for extremely precision

High precision heavy duty Aluminium-Magnesium Alloy sliding table, with build in metal bar with highest precision processing as the guiding rail, life long high accuracy, easy maintain, build in dust brushing system to ensure dust free sliding further ensure a high precision life long work.

Optional laser guiding line both for convenient reference and safety of user

Geometric cutting function

Grinding metal arms for max 400kgs loading capacity

Cnc controlled rip fence driven by servo motor for highest accuracy and convenience

Electrical tilting of blade can be LCD screen to indicate or fully automatic set on control panel

Electrical blade raise and down through electric linear cylinder fast reaction

Optimized cutting program optional for smart production
